B.Tech — Computer Science & Engineering | Jaypee Institute of Information Technology, Noida (Expected 2027)

PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience in full-stack web development, AI-powered applications, and machine learning. Strong foundation in Data Structures & Algorithms, backend development, and modern web technologies, with a passion for building scalable software solutions.

EDUCATION

Jaypee Institute of Information Technology B.Tech — Computer Science & Engineering CGPA: 7.59 Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks	Expected 2027
Vikas Bharati Public School, Delhi CBSE Class XII — 92% CBSE Class X — 88%	2022 / 2020

PROJECTS

InsightFlow AI — AI-Powered Business Intelligence Platform — natural-language analytics platform for CSV data React, TypeScript, FastAPI, LangGraph, Google Gemini, Pandas, Plotly, Tailwind CSS	2026
- Developed a full-stack AI-powered BI platform enabling users to upload CSV datasets and run natural language data analysis - Integrated Google Gemini with LangGraph to generate business insights, executive summaries, and context-aware responses - Implemented interactive Plotly visualizations auto-generated based on user queries, with a FastAPI backend for data processing and API orchestration - Built a responsive React + TypeScript + Tailwind CSS frontend and deployed publicly via Vercel (frontend) and Render (backend)	
Thinkboard — Full-Stack Note-Taking Application — production-ready CRUD app with rate-limited APIs, Redis caching, and JWT auth MERN Stack, Redis, JWT, CI/CD	2026
- Engineered full-stack app using MongoDB, Express.js, React, and Node.js with JWT-based authentication and RESTful API design - Reduced API abuse risk by integrating Upstash Redis rate limiting, supporting up to 100 requests/min per user - Designed component-based UI with Tailwind CSS and DaisyUI, cutting development time ~30% via reusable components - Automated CI/CD deployment on Render with GitHub integration, enabling zero-downtime releases	
AirIQ — Air Quality Analysis Platform — ML-powered AQI prediction platform achieving 97% R ² accuracy with real-time forecasting dashboard Python, Machine Learning, Flask	2026
- Trained and evaluated multiple supervised ML models; achieved 97% R² accuracy using Gradient Boosting Regressor on real environmental data - Built hybrid ensemble learning pipeline to improve predictive stability and reduce overfitting - Developed Flask REST APIs for low-latency real-time AQI inference and created interactive analytics dashboard with dynamic visualizations	

TECHNICAL SKILLS

Languages: C, C++, Python, JavaScript (ES6+), SQL
Frontend: React.js, Tailwind CSS, DaisyUI, HTML5, CSS3, Axios
Backend: Node.js, Express.js, FastAPI, Flask, REST APIs, JWT Authentication, PostgreSQL (learning), Redis
Databases & Caching: MongoDB (Mongoose ODM), Redis (Upstash)
DevOps & Tools: Git, GitHub, Postman, Docker, CI/CD (Render, GitHub Actions), Vercel, AWS Basics
ML / AI: LangGraph, Google Gemini, Scikit-learn, Gradient Boosting, Ensemble Learning, GPT-2 (HuggingFace), Pandas, Plotly
Areas of Interest: Backend Development, Generative AI, AI-assisted Software Engineering

CERTIFICATIONS

- JPMorgan Chase & Co. Software Engineering Virtual Experience Program — Forage
- HackerRank SQL (Basic) Certification
- The Complete Full-Stack Web Development Bootcamp — Udemy

POSITIONS OF RESPONSIBILITY

Training & Placement Cell — Student Coordinator JIIT Noida	2026 – Present
- Managed scheduling and communication for placement activities and student engagement events - Organized technical workshops to improve student placement readiness	

ACHIEVEMENTS

- Solved 300+ DSA problems across arrays, graphs, DP, and trees on LeetCode and CodeChef; regularly participate in coding contests
